

BSOne

For Windows and Mac OS

One Agent, Unified Endpoint Security Solution

Automatic Aware of the Contexts to Deliver an Optimal Security Environment.

"The Only Solution to Pass All Benchmarks in the KFTC's BMT for Remote Access Endpoint Security Project!"

- Print Output Control & Screen Protection
- PII Detection & Management
- Data Loss Prevention & Device Control
- Built-in Encryption & AIP/DRM Integration
- Network & Application Access Management

BSOne

Integrated Security Agent

AM 09:00
2022-12-31

Agent Resource Optimization *Actual CPU/memory usage may vary depending on system environment.

Name	CPU	Memory
BSOne Security Agent	0.1%	19.3MB

PC Security & Compliance Readiness

- Automated PC vulnerability assessments
- ISMS compliance and endpoint security guideline alignment
- Zero Trust-based network & application control

Data Loss Prevention

- Content-based control and management of file copying & attachments
- PII detection and auto-encryption
- Device control such as USB/Bluetooth/Wireless AP, etc.
- Screen capture and print control, and filming protection

Centralized Security Management

- Real-time status monitoring of internal & remote endpoints
- Unified management of diverse security events
- Security policy integration support with VPN, Video conferencing, and Messenger tools

By Consolidating Core Security Functions into a Single Agent, BSOOne not only Strengthens the Security but also Decreases the Cost.

Why BSOOne

From office desktops to remote work laptops, BSOOne delivers comprehensive protection across all environments.

Secure Workspaces Guaranteed

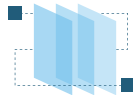

- Optimal security environment for safe PC usage anytime, anywhere whether working at the office / from home / on the move, or connected to corporate / public networks

All-in-One Security

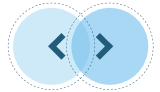

- Integrated endpoint security in a single agent including DLP, DRM, NAC, PII Protection, Print Control, etc.
- Minimized resource waste and full functionality support even on low-spec PCs

Security Orchestration

- Security events correlation by user, department, and user behavior across all environments
- Data asset status tracking and data flow history management

Context-Aware Policy Enforcement

- Automatic awareness of the context and pinpoint security policy application based on the working environments, system events, and work hours
- Automatic control of the Internet access, USB usage, encryption, screen watermarking, etc.

Feature Comparison A single agent delivers all the essential security features from DLP to PII, adapting to the changes in the work environment.

Feature		BSOne	Unified Security Solution A	Discover-based Solution B	DLP-based Solution C
DLP	Content-based file attachment control	○	×	○	○
	Local file storage control & contents collection	○	×	△	○
DRM	File encryption/decryption & access control	○	×	○	○
	AIP Integrated encryption/decryption and Label Mgmt	○	×	△	△
Device Control	USB/Bluetooth/MTP connection control & monitoring	○	○	○	○
Network Control	Network access control by IP/domain/application	○	△	×	×
WIPS	Wireless AP connection control based on blacklist/whitelist	○	○	×	×
Print Security	Print control by printer/user/timeframe & watermarking	○	×	○	×
	OCR-based contents print control	○	×	△	×
Screen Security	Screen watermarking to prevent external photography	○	×	×	×
	Capture contents and app-based behavior control	○	△	△	×
PII Protection	PII/keyword detection (*Integration with external DRM/AIP support)	○	×	△	△
PC Security Mgmt.	Vulnerability scanning and application execution control	○	○	×	×
	Hosts/routing table tamper protection against C2	○	×	×	×
Context-Aware Policy	Context-based automatic policy enforcement	○	×	×	×
